

Nicolas Oberi – Use Case Steps

Use case: Plan event participation

1. The user selects a radius (in km).
2. The system retrieves all the available events in the area around the user basing on the radius, from the system catalogue.
3. The user selects an event.
4. The system shows the user the information about the event.
5. The system asks the user if he wants to participate.
6. The user accepts to participate.
7. The system notifies the user his request is accepted and sends a confirmation email.
8. The user confirms his participation clicking on the link in the email.
9. The system notifies the user his participation is confirmed.
10. The system asks the user if he wants to create (or join) an event group.

Extensions:

1a: User has previously selected a radius: don't ask for radius again and skip to Step 2.

2a: System catalogue doesn't respond: notify the user and end the use case.

2b: No events available in the selected radius: notify the user and go back to Step 1.
